

# GO!Hosted<sup>TM</sup>

## BUSINESS PHONE SOLUTION

### Product Overview

GO!Hosted delivers IP PBX features with phones as the only purchase requirement. No other equipment or software is needed. It is easy for companies of any size to acquire a great business phone system with a comprehensive suite of PBX features. Moreover, communication through hosted VoIP enables mobile workers to stay in touch while working from branch locations or when telecommuting.

GO!Hosted establishes a new paradigm in pricing for a hosted PBX service. The average cost per extension is approximately two-thirds less than what is charged by other hosted VoIP providers for similar services. This is accomplished by separating the price of the per extension license fee from the usage of local and long distance calling. Companies with a high number of extensions but low usage (warehouses) pay less than companies with the same number of extensions but with higher usage (call centers). No longer will companies pay for usage from seldom used phones in conference rooms, kitchens, or reception areas. GO!Hosted meets the communication needs of SMBs and enterprises at an easily managed price point.

From the user-friendly administrative portal, it is easy to customize GO!Hosted to handle calls automatically according to the customer's needs. High Definition (HD) Voice quality is available for on net calling.

### GO!Hosted is:

- Economical, Ideal for SMBs, Enterprises, Branch and Remote Offices
- A Comprehensive PBX Suite
- Flexible and Scalable
- Equipped with a User-Friendly Administrative Portal
- Easy to Configure and Use
- Reliable and Worry Free
- Supported 24/7 by a Team of Experts
- Certified with Handsets from Aastra, Bria Softphone, Cisco, Grandstream, Linksys, Mitel, Polycom, Snom, Unidata, and Uniden.

Some restrictions apply. Contact Broadvox or your trusted VAR for details.

GO!Hosted delivers the traditional features of an IP PBX at a fraction of the cost. Businesses have almost limitless flexibility because they can customize the offering from a "tenant" or "per extension" perspective. This means that customers can choose optional features to be applied to all phones on their system and they can choose additional features to be applied to individual phone extensions.
