

GO!Services™

SECURE INTERNET PRESENCE

Product Overview

GO!Services provides a simple yet secure and robust business communications solution. GO!Services includes the following business web hosting and security products and services:

Shared Web Hosting – GO!Services Web Hosting is ideal for expanding presence on the web or for companies looking to maximize resources and establish a new presence quickly and easily. With an abundance of available disk space and built in website creation and marketing tools, GO!Services provides automatic back-ups, a dedicated IP address and a customer control panel to easily manage services and maintain email accounts. Business tools for blogging, podcasting and web traffic monitoring are also included. GO!Services also provides industry experts who offer design services to assist in building customer websites.

Collocated and Managed Web Hosting – Managed Private Servers (MPS) are racked and ready-to-go solutions that give customers complete flexibility. Customers can load applications specific to their business needs with the confidence that the day to day operating system and core environment maintenance is being managed. Managed Private Servers (MPS) are completely private and dedicated servers, allocated 100% exclusively to the individual customer. Resources are not shared with other users, which gives the flexibility to choose the perfect blend of administrative control and sophisticated technology needed to host individual applications.

E-Commerce Hosting and Payment Gateway – This service provides free web designing and marketing tools to make websites more visible. It is easy to setup and maintain a site with an intuitive, browser-based shopping cart interface. No web design skills are needed because meta tag editing is done for you and multiple themes are included with flexible stored templates. Maintain a catalog while tracking inventory with powerful e-commerce management tools. Transactions are safe and secure with Payment Card Industry (PCI) compliant software.

Internet Locker – With a simple pricing structure that has no hidden bandwidth charges, customers can backup their data automatically and quickly restore lost, deleted or damaged files to their PCs or laptops. Off-site storage requirements are adhered to and migration to new computers is streamlined with data reduction technology which also reduces data storage needs.
